

Training-time control

the setting lives in the training objective

Inference-time control

the setting is exposed at test time

**Shared held-out evaluation**

✓ held-out cases

✓ same estimand

✓ same reference

✓ attribute-specific losses

losses: magnitude, location, extent, timing, field validity;
final test cases are kept out of model, hyperparameter and rule selection

⊗ Varying λ only at test time has no effect unless the trained model exposes it.

● control setting

● estimator state

— evaluation against a reference
