

a Spatial error attributes

Magnitude

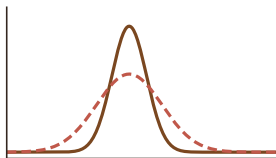

deficit under-estimated

Location

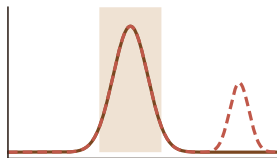

centroid displaced

Extent

region spread wider

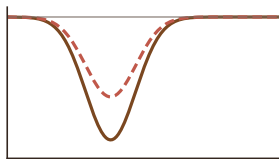

Support

abnormality outside
reference support

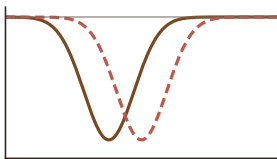

b Temporal error attributes

Magnitude

peak amplitude reduced

Timing

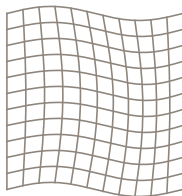

peak time delayed

time →

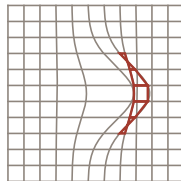

c Mapping validity

Invertible

$\det J > 0$ everywhere,
yet can still be wrong

Folded

$\det J \leq 0$ in outlined
cells: orientation reversed

Prescribed schematics with no measured scale; a single mean-squared error can hide every one of these failures.
