

Training-time control

Varying λ only at test time has no effect
unless the trained model exposes it.

Inference-time control

Shared held-out evaluation

held-out cases · same estimand · same reference · attribute-specific losses (magnitude, location, extent, timing, field validity)

final test cases kept out of model, hyperparameter and rule selection

→ produces the input to the next step

estimator state

evaluation against a reference

Conceptual schematic; no study data.
